

Individualized Medication for Individual Patients

In every field of healthcare there are some patients who don't respond to

traditional treatments. Some may require medication at a different strength than what is available by the manufacturer. While others may need medication available in different forms like a suppository form, cream, gel, chewable or liquid. We can even formulate medications that are free of sugar, casein, gluten, soy or dyes. If you have issues with your medication, we can help find an alternative solution.
